

KEEP OUR RIVERS CLEAN IN BELGIUM

YOUR LOCAL IMPACT

KEEPING OUR RIVERS CLEAN

Every year, 11 billion kilograms of plastic pollution ends up in the ocean. A big part of this pollution flows into our ocean via rivers. The presence of plastic in environment can have severe consequences for ecosystems. To share this knowledge and get people on board to do something about it, River Cleanup generates awareness of the problem and frees rivers and riverbanks of waste to avoid it ever arrives in the ocean.

RIVER CLEANUPS

Rivers are the blue arteries of our planet. However, many of the world's rivers and streams are severely affected by pollution, with plastic being one of the major culprits. To limit the amount of plastic pollution beyond the reach of collection and recycling that enters our oceans, we must remove it before it gets there.

Educating people, transforming companies, and actively cleaning our rivers are the most effective ways to stop plastic pollution from entering our environment.

ACT GLOBAL FOR A PLASTIC-FREE OCEAN

Thanks to your contribution, you enable River Cleanup make a bigger impact, install more cleaning equipment and reach more people.

Did you know that a person consumes (on average) 30 kilograms of plastic every year? For every € donated, River Cleanup collects 1 kilogram of plastics.
